

September 29, 2020

Critical Notice: Yes
Notice Type: Operational Flow Order **Mode:** Critical
Affected Locations: System Wide
Subject: OFO - Critical Mode Notice

Point operator for location(s) [Tennessee - 772292], [TENN-CIP - 772298], recently provided notice of an Operational Flow Order in effect on their system. After review, Cameron Interstate Pipeline ("CIP") has determined its own system operating conditions could be adversely affected. As such, CIP is providing notice of a change in operating conditions, from [Alert] Mode to Critical Mode.

Pursuant to Section 8.9.4 of the General Terms and Conditions of its FERC Gas Tariff, Pipeline is concurrently issuing an Operational Flow Order (OFO) - necessary to preserve system integrity, stabilize operations and maintain reliable services. This OFO is effective Gas Day¹ [09/30/2020] beginning with the [Timely] cycle and will continue until further notice.

All shippers are required to maintain total system receipts commensurate with actual deliveries. Specifically, shippers should avoid creating [Long] imbalances on the system. Delivery point operators are required to keep actual daily takes from system equal to or greater than scheduled quantities.

Updates will be provided via informational postings to Pipeline's EBB: [CIP Informational Postings](#)

Please contact a scheduling representative if you have any questions.
