August Bluewater West Leg Pigging

On August 8, 2019, Kinetica Energy Express will perform maintenance pigging on the West Leg of the Bluewater system. In order to complete this pigging, Kinetica will need to reverse the system's normal direction of flow. As a result, all production south and west of the Cocodrie plant on the Bluewater system will be directed north on the West Leg into the Pecan Island station. At this time, no nomination adjustments are necessary.

Customers are strongly advised to monitor the EBB for updates.
