Bluewater West Leg February Pigging

On February 13<sup>th</sup>, Kinetica Energy Express will perform maintenance pigging on the West Leg of the Bluewater system. In order to complete this pigging, Kinetica will need to reverse the system's normal direction of flow. As a result, all production points on the Bluewater system will be directed north on the West Leg into the Pecan Island station.

All production listed below will be required to shift nominations from delivery points downstream of the Cocodrie plant to points north of Pecan Island for four days from February 13<sup>th</sup> through February 16<sup>th</sup>.

The available delivery points are as follows:

- Meter 024012 – EnLink/LIG Gueydan
- Meter 024016 – Egan Gap Arrowhead (Harvest/Kaplan)

<u>Meter Number</u>	<u>Description</u>
11210	SMI 27A
